

## NEWS RELEASE

September 8, 2020

On September 28, 2020 the City of Webster City Water Treatment Plant will begin its annual maintenance of the clarifier which is its water softening equipment. Softening the water will be stopped until approximately October 10, 2020.

**As always the water is safe to drink without the softening process.** However, residents may choose to not use their dishwashers during this time.

During this time Kidney Dialysis patients should follow your doctor's recommendations. Medical centers that perform dialysis commonly remove the chloramines or chlorine that enters the dialysis machines. You should consult your physician if you have any questions or concerns regarding the use of water for dialysis.

We appreciate your understanding and patience during this work to allow us the opportunity to make sure our water is of the highest quality.

**Please contact Tim Danielson at 515-832-9146 for further information or with any questions you may have.**
